Section 1

Overview

Purpose & Scope

The Postal Data Wiki SME Dashboard is a web-based application designed for Subject Matter Experts (SMEs) to review, curate, and submit updates to data asset attributes within the USPS enterprise data catalog. The dashboard enables SMEs to evaluate AI-generated functional names and descriptions, make edits, and submit changes for review through a structured workflow.

Intended Audience: Data stewards, SMEs, data governance teams, and system administrators responsible for maintaining the accuracy and completeness of data asset metadata.

System Architecture

The SME Dashboard is a single-page HTML application. All three page sections are rendered within a single HTML document and toggled via JavaScript. No external backend is required — all interactions are client-side.

Component	Technology	Description
Frontend	HTML5 / CSS3 / JS	Single-file SPA with tab-based page routing
Styling	Pure CSS	USPS brand colors, responsive layout, no frameworks
Logo	Inline SVG	CDAO logo embedded directly — no external dependencies
Interactions	Vanilla JS	Filtering, search, inline editing, modal dialogs

Key Concepts

Data Asset	A named dataset or report tracked in the enterprise data catalog.
Attribute	A field or column within a data asset with a field name, standardized name, functional name, and description.
Curation Status	Indicates how completely an asset's attributes have been reviewed: Fully Curated or Partially Curated.
Functional Name	A human-readable, business-friendly label for a technical attribute field name.
AI Suggestion	An AI-generated functional name or description proposed for SME review.
Change Suggestion	A proposed modification submitted by an SME for governance review.

Section 2

Application Header & Navigation

Header Layout

A persistent sticky header appears at the top of every page, divided into three zones: the brand area, navigation tabs, and user controls.

Figure 1 — Application header showing CDAO logo, navigation tabs, and user controls

Zone	Contents	Behavior
Brand Area	CDAO logo + "Postal Data Wiki" + subtitle	Always visible, non-interactive
Navigation	Welcome · Explore Data Assets · Change Suggestions	Click to switch pages; active tab underlined in gold
User Controls	"? Help" button + avatar chip (initials + name)	Opens support; shows current user

Navigation Tabs

The three tabs control which page section is displayed. The active tab is indicated by a gold underline.

Tab	Page	Description
Welcome	Page 1	Onboarding page with step-by-step curation guide. Default landing page.
Explore Data Assets	Page 2	Main workspace for browsing assets and editing attribute metadata.
Change Suggestions	Page 3	Panel for tracking and managing submitted attribute changes.

User Controls

The right side of the header shows the current user's name and initials avatar. In this build, the user is **Mar Solis (MS)**. The **? Help** button opens contextual support.

Section 3

Page 1 — Welcome

Getting Started Workflow

The Welcome page greets the user by name and presents a four-step curation workflow. A call-to-action button navigates directly to the Explore Data Assets page.

Figure 2 — Welcome page with four-step curation guide

Step-by-Step Guide

Step 1

Select a Data Asset

Use the left panel in the Explore page to select a Data Asset. Filter by Curation Status, Data Domain, or use the Search box.

Step 2

View Attribute Details

After selecting a Data Asset, its attributes appear in the table on the right. The Attributes Found counter updates automatically.

Step 3**Edit Functional Names or Descriptions**

Review AI suggestions in the editable text areas. Editing a field highlights its border in blue to indicate unsaved changes.

Step 4**Submit Attribute Changes**

When ready, click Submit in the toolbar. Click Save to preserve progress. Use Discard to abandon all unsaved edits.

Tip: You can navigate to Explore Data Assets at any time using the "[→ Go to Explore Data Assets](#)" button at the bottom of the Welcome page, or via the header tab.

Section 4

Page 2 — Explore Data Assets

The Explore Data Assets page is the primary workspace. It is divided into a left sidebar (Filters + Assets List) and a main content area (Attributes Table).

Figure 3 — Explore Data Assets page (no asset selected)

Filters Panel

The Filters panel narrows the assets list using three controls:

Control	Options / Behavior	Effect
Curation Status	Custom dropdown with colored dots: Select... / ● Fully Curated / ■ Partially Curated	Filters assets by curation level. The selected dot color is shown directly inside the trigger.
Data Domain	Select... / Logistics / Transportation / Operations	Shows only assets in the selected domain
Search Assets	Free-text input with X clear button	Filters assets whose names contain the typed text

Custom Curation Status Dropdown

Unlike a standard browser select, the Curation Status control is a custom dropdown that renders colored dots directly inside each option and in the trigger button once a value is selected. This makes the current filter state immediately visible at a glance.

Assets List

Below the Filters panel is the paginated Assets List (3,116 total assets across 312 pages). Clicking an asset selects it, loads its attributes into the main table, and opens a detail panel showing domain, category, and URL.

Figure 5 — Sidebar: asset list and filter controls

Asset Name	Domain	Status	Asset ID
Air Transportation Utilization	Logistics	■ Partial	air-001
Customer Package Pickup	Logistics	● Full	cust-002
Customer Registration User ID	Transportation	● Full	cust-003
Daily Commercial Revenue — Business Partner	Logistics	■ Partial	daily-004
Daily Commercial Revenue — Sales Account	Logistics	● Full	daily-005

Expedited Packaging Supplies Items	Operations	● Full	exp-006
------------------------------------	------------	--------	---------

Asset Selected State

When an asset is clicked, its name and curation dot appear in the main banner, and only that asset's attribute rows are shown in the table below.

Figure 6 — Explore page with "Customer Package Pickup" selected

Curation Status Indicators

● Fully Curated	All attributes have been reviewed, named, and described.
■ Partially Curated	Some attributes still lack a functional name or description.

Attributes Table

The main content area displays the attributes of the selected data asset in a five-column table.

Figure 7 — Attributes table with inline editable cells

Column	Content	Editable?
Field Name	Raw technical column name (monospace). May show a red italic status tag below.	No
Standardized Functional Name	Official standardized name from the catalog.	No
Suggested Functional Name	AI-generated functional name in an editable textarea with ■ Reset.	Yes
Description	Current official attribute description.	No
Suggested Description	AI-generated description in an editable textarea with ■ Reset.	Yes

Inline Editing

Editable columns use inline text areas enabling fast in-context editing without modal dialogs:

Editing	Click any blue text area and type changes. The border turns blue for unsaved edits.
Reset ■	The circular ■ icon and "Reset" link below each textarea restores the AI-generated original.
Remove Background	A toggle switch in the toolbar strips the blue tint from all textareas for a cleaner view.
Submitted Tag	If already submitted, a red italic "Submitted – Under Review" tag appears under the field name.

Table Toolbar & Search

A toolbar above the table provides controls for viewing, searching, and saving edits:

Figure 8 — Table toolbar with search active ("air" query highlighted)

Control	Location	Behavior
Remove Background toggle	Left	Removes blue background from editable textareas
Search (Find...)	Right	Live text search highlighting matches in yellow across visible cells
▲ / ▼ navigation	Right	Cycles through search matches with position counter (e.g. 2/5)
X Discard	Right	Confirms then reloads page to abandon all unsaved edits
■ Save	Right	Saves current edits with confirmation
✓ Submit	Right	Submits all edited attributes for governance review

Section 5

Page 3 — Change Suggestions

The Change Suggestions page provides a review interface for tracking submitted attribute changes. It is split into a left panel (filter + suggestion list) and a right main area (detail view).

Figure 9 — Change Suggestions page (no status selected)

Submission Status Filter

A "Submission Status" dropdown filters the suggestion list. Selecting a status reveals matching items.

Status	Description
Draft	Saved but not yet submitted for review
Submitted	Awaiting approval from a data governance reviewer
Approved	Accepted and applied to the catalog
Rejected	Not accepted; requires revision and resubmission

Figure 10 — Change Suggestions page with "Submitted" status filter applied

Suggestion Items & Detail View

Each suggestion item shows the attribute name and context. Clicking it loads the full detail in the main area. The active item is highlighted with a blue left border.

Figure 11 — Change Suggestions page with a suggestion item selected

Modal Section	Contents
Header	Dark navy bar with modal title and × close button
Functional Name Comparison	Side-by-side: Current Value (gray) vs AI Suggested (blue)
Edit Functional Name	Editable text input with character counter (max 200 chars)
Description Comparison	Side-by-side: Current Value vs AI Suggested
Edit Suggested Description	Resizable textarea with ■ Reset and character counter (max 1000)
Footer Actions	Cancel · Discard (red) · Save Changes (blue) · ✓ Submit (green)

Section 6

Data Reference

Asset Inventory

Six sample assets are included in the current build. The full catalog contains 3,116 assets.

Asset Name	Domain	Category	Status	Key Attributes
Air Transportation Utilization	Logistics	Data Assets	■ Partial	fx_util_pct, cair_planned, cair_util_pct
Customer Package Pickup	Logistics	Data Assets	● Full	last_refreshed_dtm, ups_actual
Customer Registration User ID	Transportation	Data Assets	● Full	last_refreshed_dtm, ups_actual
Daily Commercial Revenue — BP	Logistics	Data Assets	■ Partial	cair_planned, cair_util_pct
Daily Commercial Revenue — SA	Logistics	Data Assets	● Full	cair_planned, cair_util_pct
Expedited Packaging Supplies	Operations	Data Assets	● Full	last_refreshed_dtm

Attribute Schema

Each attribute record contains the following fields:

Field	Type	Description
field_name	String	Raw database column name. Technical identifier, not editable.
standardized_name	String	Official standardized display name stored in the catalog.
functional_name	String (editable)	Human-readable business name. AI-suggested; SME can edit and submit.
description	String	Current official description of the attribute.
suggested_description	String (editable)	AI-generated description. SME can edit and submit.
status	Enum	Submission lifecycle: Draft / Submitted / Approved / Rejected.
asset_id	String	Foreign key linking the attribute to its parent data asset.

Curation Status Matrix

Scenario	Status Shown	Required Action
All attributes have names + descriptions	● Fully Curated	None — asset is complete
Some attributes missing names or descriptions	■ Partially Curated	Complete remaining attributes in Explore page
Attribute submitted, awaiting review	Submitted – Under Review	Wait for governance approval
Attribute rejected by reviewer	Rejected	Revise and resubmit via Change Suggestions

Section 7

Glossary

Key Terms

AI Suggestion	An automatically generated functional name or description produced by a machine learning model, presented to the SME for review.
Attribute	A single field or column within a data asset, characterized by a field name, standardized name, functional name, and description.
CAIR	Commercial Air — refers to commercial air carrier transportation handled by USPS.
CDAO	Chief Data Analytics Office — the unit responsible for data governance and catalog management.
Change Suggestion	An SME-authored proposal to update an attribute submitted into the governance workflow.
Curation	The process of reviewing, labeling, and describing data assets and their attributes.
Data Asset	A named dataset, report, or table tracked within the enterprise data catalog.
Data Domain	A business area that owns or is responsible for a set of data assets (e.g., Logistics, Transportation, Operations).
Discard	Abandons all unsaved edits and reverts to the last saved state.
Functional Name	A business-friendly, human-readable label assigned to a technical field name.
Fully Curated (●)	All attributes of a data asset have been reviewed with both a functional name and description.
Governance Review	The process by which submitted changes are approved or rejected by data stewards.
Inline Editing	Editing attribute values directly within the table, without opening a separate modal dialog.
Partially Curated (■)	One or more attributes lack a functional name or description.
Reset	Restores the AI-suggested original text to an editable field.

Save	Persists current edits without submitting them for governance review.
SME	Subject Matter Expert — responsible for verifying and improving data attribute metadata.
Submit	Sends edited attributes to the governance review workflow for approval.
Submitted – Under Review	Status tag indicating an attribute has been submitted and is awaiting approval.
UPS	United Parcel Service — a parcel carrier referenced in the logistics domain.
