

Repository Updates - 2026-05-27

#	Area	What was updated today	Outcome
1	Home metrics cleanup	Removed Assigned to You and Overall Progress from the Home summary card.	Eliminated non-SME workflow signals and reduced clutter.
2	Home layout balance	Refactored summary card layout into metric tiles and adjusted spacing so the right side is no longer empty after metric removal.	Card now looks visually balanced and intentional.
3	Context metadata	Added a small Last updated row under the metric tiles.	Added lightweight context without adding noise.
4	SME workflow alignment	Removed Completed from Home metrics, leaving In Draft and Submitted .	Matches SME-first process where approval is not part of their step.
5	Home CTA copy	Removed the sentence You have 5 assets pending your review .	Removed review-language mismatch for SME users.
6	Suggestion detail copy	Replaced pending your review and approval with ready for your edits .	Messaging now reflects editing/cleanup work.

7	Status label update	Changed Submitted — awaiting approval to Submitted — sent.	Removed approval dependency language.
8	UX improvement 1	Added a What to fix before submitting checklist on Home (plain language, jargon removal, business meaning).	Gives SMEs concrete quality guidance before editing.
9	UX improvement 2	Added Needs Attention First summary row and guidance in Explore.	Prioritizes high-value cleanup work first.
10	UX improvement 3	Performed terminology pass from review/ approval wording to cleanup/edit wording across major UI elements (header, nav, filters, badges, banners, buttons, alerts).	Consistent SME-first language throughout key flows.
11	Dynamic count	Made Needs Attention First count dynamic from currently visible filtered assets with status partial.	Count now reflects active filters/search in real time.

12	Dynamic helper note	Made the helper note under Needs Attention First dynamic with zero/singular/plural variants.	Users get contextual guidance that stays synced with the live count.
